EDUCATION

University of Auckland - Bachelor of Engineering (Honours) in Software Engineering Cumulative GPA: 7.5/9.0 (A-) - Mathematics club executive - Participation in Deans Leadership Programme	Auckland, New Zealand 2025 - Present
Mount Albert Grammar School - Mathematics (Statistics/Calculus), Physics, Digital Technology - Scholarship Technology (Digital Technology) - A-grade in the top table tennis team	Auckland, New Zealand 2020 - 2024

PROFESSIONAL EXPERIENCE

Outlier, Aether Generalist - Refined AI generated outputs and provide technical feedback to optimise model accuracy and performance. - Identified model weaknesses through robust testing, contributing to more robust machine learning systems.	Jun 2025 – Dec 2025
McDonalds, Crew Trainer - Technical training conducted for 12+ staff ensuring rapid development to high standard protocols. - Optimised operations through identifying bottlenecks and redesigning execution sequences.	Oct 2022 - Present
Scratchpad, Shift supervisor - Mentored 10+ students weekly through Python, Scratch and JavaScript, focusing on algorithmic thinking. - Managed high volume technical sessions, ensuring consistent delivery quality whilst tailoring teaching practice	Dec 2023 – Dec 2024

PROJECTS

Tower Maths (Unity/C#) - Engineered a modular tower defence system utilising C# design pattern (Singletons, interfaces, polymorphism). - Developed complex state systems for wave generation and unit upgrades, focusing on reusability and efficiency. - Awarded the <i>NCEA Scholarship in Technology (2024)</i> for excellence in software design and implementation of sophisticated educational game architecture.
Stock Portfolio Management Application (Python) - Technology: Python with customtkinter, yfinance API, Git, LLM assisted development - Development: Designed and built a financial tracking application to provide real-time portfolio analysis, including daily price fluctuations, asset valuation, and total performance metrics. - Integrated the yfinance API for live financial data and using customtkinter to develop a responsive user interface. Leveraging LLM's pair programming and version control (git) to implement modular, maintainable code. • https://github.com/Galladian/StockManager

ADDITIONAL INFORMATION

- Interests**
Sports: Table tennis, badminton, cricket, chess
Active learning: Passionate about financial markets and algorithmic trading
Community: Volunteered for Blood Cancer NZ, UN Youth NZ, UOA societies
- Technical skills**
Languages: Python, C#, SQL, HTML, C, Matlab, Java
Tools & frameworks: Unity, Git, Customtkinter, Maven, Visual Studio Code, Microsoft 365
- Professional skills**
Leadership: Employee training and mentoring, team supervision
Operations: Workflow optimisation, incident management, logistics planning
